The most complete Data Acquisition solution from Elsys available. Features high channel density in a robust housing!
The Elsys Data Acquisition Instrument TraNET EPC with its high channel density and robust housing is designed for high precision measurements in industrial environments. It is a scalable system that may grow to a total number of 64 SE channels in one device. Several devices can be synchronized with the Elsys SyncLink box.

TraNET EPC is used to acquire simultaneously many traces to address various measurement tasks in applications such as test and verification of train systems, power conversion systems, automotive and power plant maintenance.

In the Continuous Data Recorder mode, a continuous data stream can be captured and stored to disk over a long time. Even in burst mode applications TraNET EPC is capable to capture thousands of blocks of data without any loss thanks to the unique Event Controlled Recording (ECR) mode.

The powerful application software TranAX not only helps to quickly configure many acquisition channels, but also provides the right post-processing tools to analyse complex waveforms.

### General Specification

- 19 inch, 4 HE Industrial Rack (6 HE for 64 channel)
- Up to 64 channel Single Ended (TPCE, TPCE-LE or TPCE-I PCIe boards)
- Intel i5 CPU or better
- 250 GB SSD System drive
- 1 TB SSD Data drive (RAID 0)
- 4 bay HD exchange drive (1 free slot)
- Windows 10, 64 Bit Professional
- USB-3, DP, GBit, VGA, Audio
- Rear or front connectors
- Power Supply: 100 V - 250 V, 50/60 Hz
- Operating Temperature: 0 .. 45 °C
- Storage Temperature: -20 .. 60 °C
- Rel. Humidity: Up to 31°C: < 80%
31°C ..45°C: decreasing to < 50%
- Max. Operating Elevation: 2’000m
- Recording Modes: Scope, Multi-Block, Continuous, ECR
- Dual sample rate recording (with ECR only)
- Digital inputs (Markers) *(synchronized with analog signals)*
- IVI-Driver with sample programs for C++/C#, VB and LabVIEW
- LabVIEW Instrument Driver
- C++/C#, Python API

### Rear View
Data Acquisition Cards

The TraNET EPC can be equipped with different types of PCIe data acquisition cards. It is also possible to mix-up different types of cards and different types of sampling rates. The following table shows a summary of all available boards with its specific characteristics and application fields.

<table>
<thead>
<tr>

### Input Amplifier
- **Measurement Ranges**: ±50 mV – ±50 V resp. 0.1 V – 100 V (100 V limited to 70 V) in 1, 2, 5 Steps
- **Offset**: 0 – 100 % in steps of 0.1% (Resolution 0.01 %)
- **Input Impedance**: 1 MΩ (± 0.2 %) or 50 Ω (± 0.5 %) / 26 pF (± 5 %)
- **Coupling**: AC / DC software switchable (AC: -3 dB at < 5 Hz), Inputs invertible
- **Bandwidth at Range ≥ 1 V**
  - 120 MHz
  - 60 MHz
  - 30 MHz
  - 18 MHz
- **Bandwidth at Range < 1 V**
  - 80 MHz
  - 50 MHz
  - 8 MHz
  - 7 MHz
- **Slew Rate (10 – 90 %) @ Range ≥ 1 V**
  - 4 ns
  - 6 ns
  - 13 ns
  - 25 ns
- **Slew Rate (10 – 90 %) @ Range < 1 V**
  - 6 ns
  - 9 ns
  - 50 ns
  - 60 ns
- **Settling Time to 1 %**
  - < 200 ns
  - < 200 ns
  - < 200 ns
  - < 200 ns
- **Low Pass Filter (RC-Filter)**
  - 2 Steps (1 MHz and 100 kHz) software switchable
- **Antialiasing-Filter (optional)**
  - 200 Hz – 5 MHz, min. 4. order Butterworth, software setable
- **Common Mode Range**
  - Differential-Mode: ±8 V or +/-80 V at ranges: > 5 V
- **Common Mode Rejection**
  - > 74 dB (DC – 1 kHz); > 60 dB (–100 kHz); > 40 dB (–5 MHz)
- **Range Error (a)**
  - max. 0.1 % typ. 0.07 %
  - (after autocalibration)
- **Offset Error (a)**
  - max. 0.1 % typ. 0.02 %
  - (after autocalibration)
- **Offset Drift (a)**
  - max. (0.0100 % + 0.1 mV) per °C, typ. (0.0050 % + 0.03 mV) per °C
  - (will be compensated by autocalibration)

### Input Noise:
- **@ max. Sample Rate**
  - < 0.250 mVrms
  - < 0.120 mVrms
  - < 0.070 mVrms
  - < 0.045 mVrms
  - < 0.025 mV rms
- **@ 5 MHz Sample Rate**
  - < 0.200 mVrms
  - < 0.120 mVrms
  - < 0.070 mVrms
  - < 0.040 mVrms
  - < 0.025 mVrms
- **@ 1 MHz Sample Rate**
  - < 0.200 mVrms
  - < 0.120 mVrms
  - < 0.070 mVrms
  - < 0.040 mVrms
  - < 0.025 mVrms
- **@ 10 kHz Sample Rate**
  - < 0.200 mVrms
  - < 0.120 mVrms
  - < 0.070 mVrms
  - < 0.040 mVrms
  - < 0.025 mVrms

### Signal to Noise Ratio SNR:
- **@ max. Sample Rate**
  - 59 dB
  - 62 dB
  - 67 dB
  - 70 dB
- **@ 5 MHz Sample Rate**
  - 59 dB
  - 62 dB
  - 67 dB
  - 70 dB
- **@ 1 MHz Sample Rate**
  - 59 dB
  - 62 dB
  - 67 dB
  - 70 dB
- **@ 10 kHz Sample Rate**
  - 59 dB
  - 62 dB
  - 67 dB
  - 70 dB
- **@ 5 kHz Sample Rate**
  - 59 dB
  - 62 dB
  - 67 dB
  - 70 dB
- **@ 1 kHz Sample Rate**
  - 59 dB
  - 62 dB
  - 67 dB
  - 70 dB

### Channel Isolation (Crosstalk) @ 10 kHz
- **Ranges < 1V**
  - > 80 dB
- **Ranges > 60 dB**

### Special: Autocalibration
- Auto adjustment of gain and offset in all measurement ranges. (Initiated by software)

### Trigger
- **Number of Trigger Channels**
  - 4 coupled to analog inputs, pos./neg.Edge, with or without hysteresis, Window IN, Window OUT
- **Advanced Trigger (Option)**
  - On all analog inputs: Slew Rate, Pulse Width, Pulse Pause or Period (too short or too long = Missing Event), State (above / below), AND link, Product (trigger signal is calculated from 2 channels)
- **External Trigger input**
  - 1 per System (TTL), pos. or neg. Edge
- **Trigger Delay**
  - -100 % (Pretrigger) to +200 % (Posttrigger) in 1 % steps

### Miscellaneous
- **Digital Inputs (Marker)**
  - 8 (2 per analog channel) (TTL) software switchable
- **Optocoupler Connection Box (5 to 48 V) as additional option**
- **Ext. Control Inputs (TTL)**
  - Trigger, Arm/Disarm, Ext. Sampling (fmax = 10 MHz), external command to start recording
- **Status Outputs (TTL)**
  - Trigger Output, Armed (=True during recording)
- **ICP® Sensor Supply (Option)**
  - 4mA Integrated Current Power for piezo sensors

### Trigger

- **Number of Trigger Channels**: 4 or 8, coupled to analog inputs, pos./neg. Edge, with or without hysteresis, Window IN, Window OUT
- **Advanced Trigger (Option)**
  - On all analog inputs: Slew Rate, Pulse Width, Pulse Pause or Period (too short or too long = Missing Event), State (above / below), AND link, Product (trigger signal is calculated from 2 channels)
- **External Trigger input**
  - 1 per System (TTL), pos. or neg. Edge
- **Trigger Delay**
  - -100 % (Pretrigger) to +200 % (Posttrigger) in 1 % steps

### Miscellaneous

- **Digital Inputs (Marker)**
  - 8 rsp. 16 (2 per analog channel) (TTL)
  - Optocoupler Connection Box (5 to 48 V) as additional option
- **Ext. Control Inputs (TTL)**
  - Trigger, Arm/Disarm, Ext. Sampling (fmax = ¼ of the max sample rate), external command to start recording
- **Status Outputs (TTL)**
  - Trigger Output, Armed (=True during recording)
- **ICP® Sensor Supply (Option)**
  - 4mA Integrated Current Power for piezo sensors

---

*2) The input noise depends on the sample rate.
*3) At 14 bit modules the SNR will be reduced by 2 dB
*4) At 8-channel modules the SNR will be reduced by 3 dB
Multi-Device Synchronization

The SyncLink SLB-8 allows to expand the measurement setup up to 8 (optional up to 16) devices. The maximum cable length is limited to 10 meters between the DAQ device and the SyncLink which is sufficient in most indoor and lab applications.

The synchronization precision is 12.5 ns and is much better than normally achieved with other synchronization methods like GPS or PTP.

Distributed Multi-Device Synchronization

The SyncLink 2.0 is the highest level of synchronization and allows to daisy-chain several SyncLink units together. The connection between them is established over fiber optical cables (FOC) allowing much larger distances between the DAQs than possible with the SyncLink SLB-8. The connection between the DAQ and the SyncLink 2.0 is still based on RJ45 CAT. 6 cables but its maximum length is expanded to 50 m while it is only 10 m for the SLB-8.

A main advantage beside the high synchronization precision of 12.5 ns is the possibility to transmit also trigger message to all connected devices in sub-microsecond delays. This makes this solution most suitable for measurement where a trigger condition is not available on all location.
TranAX

TranAX is the universal data acquisition software from Elsys designed for TPCX/TPCE data acquisition cards and the turnkey TraNET data acquisition instruments.

Key Features:

- Configures quick and easy many analog input channels, no programming required
- Data visualization in Multi-Waveform displays
- Several cursor for easy data readout and reporting
- X-Y data display
- FFT Analysis with different scaling and windows function
- Measurement data - video synchronization
- More than 40 scalar functions to measure any significant waveform parameter on time or FFT curves
- Powerful formula editor for more than 60 mathematics functions, syntax highlighting, for-loops, array calculations, string manipulations, etc.
- Curve fitting (Polynomial regression)
- Autosequence-macro’s for easy to set up, fast automated measurements
- English and German version

LabVIEW Instrument Driver

Elsys provides a LabVIEW instrument driver which is fully compliant with the NI driver design guidelines. The instrument drivers provides the following features:

Key Features:

- Ready-made measurement flow-control VI’s for scope, multiblock, continuous and ECR measurement modes
- Express VI’s for amplifier and trigger settings
- VI’s for data readout
- Express VI’s for setup the connection to the modules and instruments

C++ / C# / Python TpcAccess API

TpcAccess API is based on a client/server architecture and can be integrated in any custom specific software. It handles all network traffic and synchronisation task when several clients are connected to the same device.

TpcAccess API is compatible with all Elsys Data Acquisition devices and cards like TraNET FE/PPC/EPC and TPCX/TPCE modules.
